

# Setting up Eclipse on Windows

---

- Create a new project: Go to File - New - Java Project
- Give the new project a name, e.g., mydeliberationTest
- Drag the folders in the following picture (SVN) into src folder of Eclipse, select "Link to files and folders" radio button when asked by Eclipse.

- Follow the path:  
mydeliberationTest (Project name) - Properties -  
Java Build Path - Libraries - Add JARs.  
Select sqlite4java.jar under directory:  
mydeliberationTest -src- sqlite4java-201

- All set. Good luck!
